Summary

I am a Principal Solution Architect with 15+ years of experience designing and delivering enterprise-scale, cloud-native platforms across public and private sectors.

My work focuses on building scalable, secure, and data-driven solutions, aligning cloud infrastructure, data platforms, and AI enablement with real business and organizational needs. I have led national-scale GovTech platforms, large API ecosystems, and complex digital transformation initiatives, working closely with engineering teams and executive stakeholders.

I enjoy solving complex problems at scale, translating strategy into practical architecture, and designing platforms that are built to last.
